

How to install watch faces from APKs without Google Play

Step 1

On your watch go to Settings > About watch > Software info and tap on "Software version" until you get the developer mode enables message:

Step 2

Download and extract [Platform Tools](#). Open the folder in the terminal (Right click > Open in terminal on Windows)

Step 3

Make sure your watch is connected to the same Wi-Fi network as your computer. In your watch settings go to Developer options and enable "ADB debugging" and "Debug over Wi-Fi"

Step 4

Note the IP address and port for your device:

In the terminal run: (you may or may not have to include "./" depending on your operating system)

```
./adb connect ip:port
```

Step 5

Move the APK file to the platform tools folder.

In the terminal run: (replace filename.apk with the APK's file name)

```
./adb install filename.apk
```

Step 6

Done!!! Now enjoy the amazing watch face from [✂XM9G!](#)
